INFORMATION

We are large growers and not jobbers.

We try to please our customers at all times.

We do not buy dahlias of failing or bankrupt growers to fill our orders.

Dahlia bulbs shipped by express are rated as second class and are listed as perishable.

All freight and parcel post shipments travel at purchaser's risk as freight companies do not insure against freeze. Freight shipments travel slow and are handled rough. First-class freight costs about the same as express.

Be sure your express agent has given you second-class rates. If unable to get second-class, notify us and we will assist you.

Culture and Care of DAHLIAS

Plant dahlias in spring after the ground is warm and danger of frost is past. From May 10th to June 10th in the central states. Lay tubers flat and cover four to six inches deep. Plant two feet apart in the rows and rows three to four feet apart.

Don't plant close to trees or large shrubbery on account of the tree roots using all the moisture. It is not advisable to plant on the south or west side of a building on account of the sun reflecting too hot on the plants. Always plant where the ground is well drained. Dahlias will grow in any good soil from pure sand to stiff clay, if water and fertilizer are added when needed. They usually bloom nicely without any water or additional fertilizer in the average garden where it will grow good potatoes and vegetables, if cultivated properly.

Cultivate dahlias each week and water occasionally. When dahlias begin to bud and bloom, stop cultivating but keep the weeds out; give the plants a good liberal dressing of bone meal, cow manure, sheep manure, or any fertilizer that is not too strong or has a tendency to burn the plant, keeping manure six inches away from the plant, and water thoroughly once each week, or mulch over manure with straw or lawn clippings. Drive a strong stake about ten inches from plant and tie the plant to prevent it blowing over.

Early in the season insects eat on the buds and flowers. When flowers open only on one side this is because the bud was stung when smaller. Examine your buds and you can detect this by a small black speck on the side of the bud where it has healed over.

Where large blooms are wanted, take all but three of the largest buds off, leaving all the strength to the three buds and they will be of enormous size.

When frost kills the plants in the fall, lift tubers carefully and cut off the stalks; then pack carefully in boxes with dirt or wrap with paper and put in paper cartons. Store in basement where they will not freeze or dry out. Leave in storage until planting time the next spring.
